Heavy Rain Flash Flooding / Debris Flow					Coastal	All Regions	
Snow					Inland (Sierra)	Inland (Sierra)	Inland (Sierra)

Risk Levels

Little to None

Minor

Moderate

Major

Extreme

Weather Key Points

Regional Operations Center

Western Region

Wednesday, November 23

- Lighter winds are expected through Wednesday afternoon, but occasional breezes, very dry fuels and warmer temperatures will keep locally elevated fire weather conditions in place for areas away from the coast in southern California
- Another moderate Santa Ana wind event is expected late Wednesday night through Friday morning across southern California
 - Wind gusts of 35-55 mph will be most common, with gusts to 65 mph locally possible
 - Elevated to critical fire weather concerns are expected for parts of southern California on Thursday due to warm temperatures and continued dry conditions
- Very cold overnight temperatures continue mainly across inland regions through mid week
- Better chances for rain and mountain snow will develop across northern California next weekend into early next week, with moderate to locally heavy precipitation possible, but exact details still remain uncertain at this time. Precipitation could extend into southern California Monday or Tuesday.

Daily Precipitation Forecast

Regional Operations Center
Western Region
Wednesday, November 23

**Precipitation is not expected
through Friday**

Important Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms will produce locally much higher rainfall amounts.

Precipitation (inches)
